

(1/26/2025) Meeting 1:

- Make Team Contract and Team Agenda
 - We introduced ourselves and got to know each other
 - We then Started working on the 2 Documents and discussing what would be good answers that work for everyone
 - We also discussed our schedules and how flexible it might be due to some scheduling conflicts on certain days
 - After finishing our documents we discussed when we would next want to meet and we decided on 1/30/2024 and then try to meet at least once a week.

(1/30/2025) Meeting 2:

- Agenda: Discuss topics/areas of study to choose for our dataset
 - We first come up with Sports, Medicine, and Politics
 - After heavy discussion we came to a decision of wanting to explore politics
 - Some of us had interest/experience in it and others thought it would be interesting to learn more about.
 - We discuss what political topics to explore:
 - How geography can affects voting
 - Opinions on controversial topics like Abortion, Police Reform, etc.
 - How Financial status can affect voting
 - How Voting has shifted during 2020-2024
 - How Voting has shifted during 2016-2020
 - After not being able to come to a conclusion, we decided to do some research over the weekend and by next week's meeting we will come to a decision.

(2/3/2025) Meeting 3:

- Agenda: Finalize topic for dataset
 - First we gave our viewpoints and opinions on what data we would personally like to explore and decided that observing how voting shifted would be what we wanted to explore.
 - A part of this reason was because we thought that voting was data that is very easily accessible and recorded
 - We wanted to relate it to geography so we could say how certain areas in America may have shifted in voting over time.
 - After not being able to find the data, we decided we would come together again next week and try to find a dataset.

(2/9/2025) Meeting 4:

- Agenda: Find dataset for approval
 - First we started exploring for datasets in our own separate directions
 - We also created a space group chat on gmail in addition to our existing snapchat group chat to share links to different repositories/files/websites containing different datasets.
 - After not being able to find one we decided that we should look up websites others found more luck in.
 - Eventually Harsh found a repository that containing the exact datasets we were looking for:
 - The county level voting for 2016, 2020, and 2024
 - After finding that we decided that we would explore the 2020 and 2024 datasets and see if it would be approved for our 2/13/2024 meeting with Professor Mallavarapu

(2/18/2025) Meeting 5:

- Agenda: Finding a new dataset to complement current ones
 - Following our meeting/emails with Professor Mallavarapu, we concluded that a new dataset was necessary to properly complete the assignment
 - We found a potential dataset earlier in the morning of that day, which we would look over and discuss later.
 - After getting together we looked over the dataset and found that we would be able to merge the 2024 dataset we already had with this new dataset through the FIPS county code.
 - The new dataset was based on 2024 financial data on families in each county of the US.
 - The data also consisted of 10 values per county, as family makeup split them apart.

(2/26/2025) Meeting 6:

- Agenda: Completing the Cleaning/Wrangling, and Merging of our data
 - First we divided up responsibilities (Still assist each other when necessary)
 - Sidh and Harsh focusing on documentation
 - Caleb and Wesley focusing on the data
 - Meeting Notes are cleaned up and organized and data dictionary was filled out
 - For cleaning our data, counties that were missing data, were dropped, and some missing values were kept as they gave context for families without children.
 - For wrangling our data, each county's 10 rows were grouped and averaged into a single row for each county to make it mergable with Dataset 1.
 - For merging our data we merged the two datasets on their FIPS county code using an inner merge.

(3/3/2025) Meeting 7:

- Agenda: Completing Presentation and PDF Report
 - First we divided main task and helped each other complete what was necessary
 - Everything completed without obstacles, except core features and exploratory analysis
 - We later found the piazza post that helped explain what to do with the issue
 - After we got the necessary information, we worked to make the formatting match
 - Following this we worked on visuals to make the powerpoint more appealing
 - We made sure to list our resources in a proper citation format.
